this book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the geodetic observatory wettzell germany it starts with a step by step introduction to developing stable and safe scientific software to run successful software projects the use of software toolboxes is another essential aspect that leads to the application of generative programming an example is a generative network middleware that simplifies communication one of the book s main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques the complete software design of a satellite laser ranging system is taken as an example such automated systems are then combined for global interaction using secure communication tunnels for remote access the network of radio telescopes is used as a reference combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the global geodetic observing system ggos with regard to industry 4 0

integrated process modeling advanced control and data analytics for optimizing polyolefin manufacturing detailed resource on the why what and how of integrated process modeling advanced control and data analytics explained via hands on examples and workshops for optimizing polyolefin manufacturing integrated process modeling advanced control and data analytics for optimizing polyolefin manufacturing discusses as well as demonstrates the optimization of polyolefin production by covering topics from polymer process modeling and advanced process control to data analytics and machine learning and sustainable design and

industrial practice the text also covers practical problems handling of real data streams developing the right level of detail and tuning models to the available data among other topics to allow for easy translation of concepts into practice written by two highly qualified authors integrated process modeling advanced control and data analytics for optimizing polyolefin manufacturing includes information on segment based modeling of polymer processes selection of thermodynamic methods estimation of physical properties for polymer process modeling reactor modeling convergence tips and data fit tool free radical polymerization ldpe eva and ps ziegler natta polymerization hdpe pp llpde and epdm and ionic polymerization sbs rubber improved polymer process operability and control through steady state and dynamic simulation models model predictive control of polyolefin processes and applications of multivariate statistics and machine learning to optimizing polyolefin manufacturing integrated process modeling advanced control and data analytics for optimizing polyolefin manufacturing enables readers to make full use of advanced computer models and latest data analytics and machine learning tools for optimizing polyolefin manufacturing making it an essential resource for undergraduate and graduate students researchers and new and experienced engineers involved in the polyolefin industry

a collection of highly selected peer reviewed chapters this book showcases the research of an international roster of scientists it covers nanomaterials with emphasis on synthesis characterization and applications it also presents emerging developments in nanotechnology in areas as diverse as medicine energy electronics and agriculture in
